

Jezero

16 × 10 km
rectangle on Mars

12.8 × 8 km
at current game scale

11.7%
of proposed area built

Sol 1980
end of saved mission route

The dashed rectangle is the proposed whole traversable world, not a route corridor. Gold follows NASA's saved rover track; teal is today's playable boundary. Lettered circles are invented activity search areas, not surveyed sites. Pink outskirts suggest higher turbo availability, not exact pickups.

Built: 1 Landing / floor · 2 Seitah · 3 Three Forks · 4 Kodiak · 5 Belva

Unbuilt: 6 Neretva / Bright Angel · 7 Western rim · 8 Falbreen · 9 Later western traverse

The route carries the main story.

Along the rover journey

Concentrate recognizable geology, mission stories, photo viewpoints and meaningful discoveries along the actual route. Preserve its loops and revisits; it is not a straight road across the map.

Keep the broader world open. The route is a historical guide, not a locked campaign or required order. Existing terrain and six discoveries remain available immediately.

Off the route

Scatter a few optional activity pockets with room to approach, play and leave. Surround them with quieter terrain. These letters reserve space for ideas already documented, not six newly approved games.

Turbo distribution

- Main route:** occasional pickups, keeping landmarks clear.
- Side trips:** more pickups near activity approaches and useful detours.
- Far reaches:** richest availability, with outward and return chains.

Turbo rewards roaming; it must not be required to escape a pocket. Preserve the 2.5× kit and unpowered airborne coasting. Density, respawn rules and exact placement await driving tests.

Candidate activity pockets

A / Track art + photo lookout
A flat drawing pad beside a reachable lookout. Camera mode comes first; protect tracks until photographed.

B / Radar sample search
A bounded off-route search pocket. Dig/stop/cancel controls and authentic science framing remain to be designed.

C / Longest-jump course
An authored run-up and clear landing area. Turbo supports the approach; preserve airborne coasting.

D / Target-jump course
A separate optional challenge, outside the Belva landmark. Launch geometry, targets and safe landing need survey.

E / Atmospheric readings
A remote science stop. Readings must be identified as simulation, not live Mars measurements.

F / Helicopter activity
Reserved optional Ingenuity-inspired game from the wider-world brief. Exact mechanics and location remain parked.

The existing Delta race stays in its current terrain. New activity names describe game ideas, not historical Perseverance operations. Photography is also useful at main-route vistas.

How massive?

160 km² on Mars / 102.4 km² in-game. The built area is 18.65 km² on Mars / 11.94 km² in-game. A square of the same width would add 60% more area, mostly away from the recorded journey; the rectangle is the recommended starting point.

The final saved waypoint reports **45.13 km** of mission travel, about 36.1 km at current scale. This includes backtracking, not a straight crossing or a promised play time.

Build outward in broad blocks

- Built:** floor / Seitah, Three Forks / Kodiak, upper delta / Belva.
- Next survey:** Neretva / Bright Angel and its route connection.
- Then:** rim ascent, Falbreen and the later western journey, with surrounding free-roam terrain in each block.

Survey the remaining rectangle before committing its exact edges. Use streamed terrain and physical-device tests to establish a workable performance budget.

Evidence and limits

Saved NASA MMGIS traverse and waypoints through sol 1980, retrieved 15 September 2026; not a claim about today's rover position. Local coordinates match the game. Map spacing is 80% of real distance; no new scale or physics change is proposed. The teal outline follows the runtime boundary, not a claim that every cliff is driveable.

Relief: existing 100 m overview of the USGS CTX elevation model. The westernmost 2 km has no local overview coverage and is explicitly hatched. Fine terrain, slopes, viewpoints, approach routes and activity sites remain unsurveyed outside the built area. No gameplay terrain or pickups changed in this revision.
